

Junior Business Intelligence Analyst

Job description, responsibilities and duties

- You will be responsible for the whole Business Intelligence cycle from data extraction (with our software engineers), transformation, loading and report building
- You will work on projects for our internal clients (especially Advertising and Consulting teams) and external clients and by providing reports and analyses you allow them to make smart and data-based decisions
- Over time you will become an expert of the relevant tools such as Microsoft Power BI and Power Query
- You will quickly take over responsibility for individual customers and become their main contact person
- You will break down complex analyses for the report consumers, create easily understandable presentations and present those to your clients
- You steer the collaboration with the software team, for which you translate the users' needs into technical requirements
- You will become part of a product development and provide your input on customers' needs and technical feasibility
- Your focus will be on Business Intelligence projects, but you will also get deep insights into other teams such as Advertising , so that you get a broad understanding of our business and understand the "bigger picture"
